Scare Lift

SYNOPSIS:

In the winter of 1973, 13 skiers lost their lives in a horrific ski lift accident but only 12 bodies were recovered. Police found staggered tracks near the scene of the accident, leading from the site and disappearing into the winter woods.

Officially, the accident was recorded as “unexplained.” Inspections found that the ski lift was working properly at the time of the accident; and the City of Franklin authorities eventually dropped the investigation, reporting it simply as a freak accident. But locals have their own theories. Some claim the skiers planned a group suicide; others say it was targeted murder. A selective faction even believes the Hill itself reached out and claimed them for Hell beneath. As for the missing skier: people think he’s still in the woods, deranged from the terror of the accident. On cold winter nights, drivers on Hwy 36 report seeing the chairlift moving well past park close. It’s operated by the missing skier, they say, trying to lure in companions for his dead friends.

When the infected staff from the Top Secret Containment Facility chase you towards the moving lift, you are presented with only two options: stay behind and be devoured by flesh-eating zombies, or board the decrepit death trap run by a mad man. If you think you’re safe when the safety bar lowers, though, think again. You may be protected from the zombies awaiting you below, but the unfriendly ghosts alongside you have other plans.

Don’t look down – on the Scare Lift there’s more to be afraid of than heights.
